China is an optimal country for electric aviation:

- ✓ Rising awareness of environmental issues in the society;
- ✓ The government's ambitious development plan for the technology-driven low-altitude economy;
- ✓ China is the leading country in electric mobility, renewable energy and the supply chains at large as the world's largest electric vehicle market since 2015 as well as the world's largest manufacturer and user of renewable energy products including batteries, solar panels, wind turbines and many other products in the supply chain. Only with the involvement of the Chinese players would electric aviation possibly prevail globally.

e-flight-forum global 2017 Beijing

The first e-flight-forum held in Beijing in November 2017 invited over 40 prominent presenters from around the world, had several world premiere projects and attracted over 300 audience.
